

StemInsure®

Providing a Lifetime of Stem Cells for Your Dog

Why Store Stem Cells for Your Dog?

The StemInsure service provides your dog's own Stem Cells that can be cultured to supply a lifetime of stem cell therapy.

StemInsure Description

- Your veterinarian collects a small sample of fat during a surgical procedure such as a spay, neuter or other surgery requiring anesthesia.
- Your veterinarian ships the fat overnight to VetStem for processing and stem cell banking.

Cell Culturing

- In the future, when your dog needs stem cells, your veterinarian can order cell culturing to provide a lifetime of stem cell therapy for your dog.

Banked Dose Processing

- Your veterinarian can order the banked doses of stem cells to treat your dog.

What can be Treated with Stem Cells?

- Current uses include arthritis and soft tissue injuries (tendon and ligament).
- Future uses may include treatment of kidney, liver, heart, and immune mediated diseases.

Benefits of StemInsure

- Collect stem cells while your dog is young and healthy, not when injured or debilitated.
 - One fat collection can provide a lifetime of stem cell therapy for your dog.
 - Affordable way to store stem cells for your dog.

Important Considerations

- Cell culturing and banked dose processing incur additional cost. Consult your veterinarian for an estimate of potential future costs for treatment.
- VetStem will store the StemInsure sample for one year at no charge. After one year the cost for storage of the StemInsure sample is only \$50 per year.
